SUMMARY

Versatile software professional who builds end-to-end digital products across web, game, and security-focused systems. Designs user interfaces, implements backend services and APIs, works with databases, supports deployment and maintenance, and applies cryptographic thinking to strengthen data protection and system trust.

EXPERIENCE

Backend Development

Contributed to backend systems and continued strengthening deployment discipline and maintainability. Built and supported backend-focused work for secure, maintainable production systems. Worked on financial and exchange-style workflows with careful data handling.

Frontend Engineer

Led delivery of multiple projects and built a real-time auction interface. Focused on user experience improvements and responsive interface delivery. Supported future backend security features and collaborative team execution.

Jr Software Developer

Designed and built microservice-based systems used in trade-driven workflows. Worked with stakeholders on a Mining Commodity Exchange System. Guided the development team through successful deployment.

Aspiring DevOps

Maintained systems in production while preparing for Red Hat and AWS Solutions Architect certifications.

BUILDS

- **Calc:** Calc is a full-stack scientific calculator with a Flask backend and a canvas-rendered UI. It safely evaluates expressions using a custom AST parser, supporting trigonometry, fractions, and notation conversion. The interface features session memory slots, a live clock, and tactile button states---all built with vanilla JavaScript and Python to demonstrate secure math evaluation and polished, responsive design in a compact portfolio piece.
- **Dice Arena:** Blazor Server casino dice game with 3D canvas dice, three modes, custom dice builder, leaderboard, and immersive audio.
- **Novara Estates:** Novara Estates is a modern real estate project built to showcase premium properties through a clean, responsive interface and intuitive user experience. It was designed to present listings professionally while making property exploration simple, engaging, and visually appealing for potential clients.
- **Endless Runner:** An engaging endless runner web game built with a smooth, responsive interface and dynamic gameplay mechanics. The project focuses on fast-paced interaction, clean visuals, and an enjoyable user experience across devices.
- **File Organizer:** A small Flask web app that accepts a folder upload, organizes files according to the selected rules, writes logs, and returns a zip archive of the organized result.
- **MagniType:** MagniType is a local Python automation utility for applying display and accessibility preferences on the current machine. It follows the document's layered design: a CLI entry point, platform detection, shared validation and logging, and isolated OS adapters for Windows, macOS, and Linux. The code treats unsupported settings as normal, expected cases and skips them gracefully instead of crashing.

CORE SKILLS

- **Backend:** I build secure, scalable server-side systems, APIs, and application logic using modern backend frameworks and languages. My work focuses on clean architecture, business logic, authentication, database interaction, and reliable performance across web applications and real-time systems.
Python, Django, Flask, ASP.NET Core, Blazor Server, Node.js, Express, Spring, Laravel, Ruby on Rails
- **Frontend:** I create responsive, interactive user interfaces that are clean, accessible, and easy to use across devices. I focus on modern UI development, component-based design, state handling, and smooth user experiences with strong attention to performance and usability.
React, Next.js, Angular, Svelte, Nuxt, HTML5, CSS3, JavaScript, TypeScript
- **Data & APIs:** I design and integrate structured data systems and API-driven workflows that connect frontend and backend services efficiently. My experience includes working with relational databases, RESTful APIs, and real-time communication layers for dynamic applications.
SQL, REST APIs, relational databases, Socket.IO
- **Tools:** I use modern development tools to manage source code, collaborate effectively, test features, deploy applications, and monitor project stability. I am comfortable working with version control, CI/CD workflows, debugging tools, and development environments.
Git, GitHub, CI/CD, testing, deployment, monitoring, code editors, IDEs

EDUCATION & CERTIFICATIONS

- **Full-Stack Developer Certificate:**
FreeCodeCamp, Sep 2024 - Apr 2026
- **Foundational C# with Microsoft:**
FreeCodeCamp, Sep 2024 - Apr 2026

CURRENT ENROLLMENT

- **Saylor University:**
 - Cryptography & Network Security, Sep 2025 - Dec 2026
 - Information Security, Sep 2025 - Dec 2026
 - Bitcoin For Developers, Sep 2025 - Dec 2026
 - Modern Database Systems, Sep 2025 - Dec 2026
- **Game development fundamentals and interactive UI experimentation.**
- **Preparing for Red Hat and AWS Solutions Architect certifications.**

LANGUAGES

English, Swahili, Spanish, Japanese
